In de contact pagina heb ik gebruik gemaakt van een ingesloten google maps iframe. Dit is handig omdat je niet veel hoeft te doen om het frame responsive te maken. Aangezien de inhoud ervan al responsive is hoef je enkel een width te geven aan het iframe.

```
<header>
    <div class="logo-container">
        <a href="index.html"><img src="img/logo.png" alt="" class="logo"></a>
    </div>
        <div class="hamburger_container">
            cimg src="img/hamburger.png" alt="menu" class="hamburger">
        <div class="nav grid">
            <div class="column-5"><a href="index.html" id="active-page">Diensten</a>
            </div>
            cdiv class="column-5">ca href="over.html">0ver onsc/a></div>
            cdiv class="column-5">ca href="portfolio.html">Portfolio</a></div>
            cdiv class="column-5">ca href="team.html">Teamc/a>c/div>
            cdiv class="column-5">ca href="contact.html">Contact</a></div>
        </div>
    </nav>
</header>
```

Voor de navigatie heb ik gebruik gemaakt van een gridsysteem omdat het gemakkelijker is om responsive te werken.

```
var button = document.querySelector(".hamburger");
var nav = document.querySelectorAll(".column-5");
var count = 0;

button.addEventListener("click", openAndClose);

v function openAndClose() {

v if (count % 2 < 1) {
    button.src = "img/kruis.png";

v for (i = 0; i < nav.length; ++1) {
        nav[i].style.display = "block";
    }
    count++;

v } else {
    button.src = "img/hamburger.png";

v for (i = 0; i < nav.length; ++i) {
        nav[i].style.display = "none";
    }
    count++;

}</pre>
```

Voor mijn hamburger menu heb ik gebruik gemaakt van javascript. Het script verandert de afbeelding bij iedere click. De clicks worden bij gehouden in de variabele count. Als count/2 kleiner is dan nul, dan wordt de menubalk geopend. Indien dit niet het geval is dan wordt de menubalk gesloten. Met een for-loop wordt iedere menubalk de een array geopend of gesloten doormiddel van de display aan te passen.
